Profile

Data Scientist with a strong foundation in applied artificial intelligence, statistics, and data-driven problem solving. Experienced in building analytical pipelines, developing machine learning models, and deploying data-powered applications. Passionate about solving real-world business problems through analytics, software engineering, and AI-driven systems.

Core Technical Skills

Programming & Tools

Python | SQL | NumPy | Pandas | Scikit-learn |
Matplotlib | Seaborn | Git & GitHub | Excel

Data & Analytics

Exploratory Data Analysis | Statistical Modeling |
Hypothesis Testing | Business Analytics

Machine Learning & AI

Supervised & Unsupervised Learning | Feature
Engineering | Model Evaluation | App. Generative AI

Software Engineering

Web Development (HTML, CSS, JavaScript)
Data Structures & Algorithms

Experience

Company

Data Analyst Intern

- Analyzed business datasets to uncover trends, patterns, and actionable insights for decision-making.
- Built dashboards and reports to communicate insights to non-technical stakeholders.
- Applied statistical techniques to evaluate performance metrics and business outcomes.

Startup

Applied AI/ML Intern

- Developed and evaluated machine learning models for real-world datasets.
- Assisted in deploying ML pipelines and integrating AI features into applications.
- Experimented with Generative AI APIs to build data-driven AI applications.

Flagship Projects

End-to-End Data Science Project

- Built a complete data science pipeline from data cleaning and EDA to model deployment.
- Applied machine learning algorithms to solve a real-world prediction or classification problem.

Business Analytics Case Study

- Performed deep analysis on business datasets to evaluate customer behavior, revenue drivers, and growth strategies.
- Delivered insights using visual analytics and statistical reasoning.

Generative AI Application

- Designed and implemented an AI-powered application using LLM APIs for real-world use cases.
- Focused on prompt engineering, application logic, and deployment.

Software Engineering Project

- Built a full-stack or data-centric web application integrating analytics or AI components.
- Emphasized clean architecture, performance, and usability.

Education

2025 – 2029 Jodhpur	Indian Institute of Technology Jodhpur B.Sc. — Applied Artificial Intelligence & Data Science
------------------------	---

Achievements & Competitions

- _____ at a national-level hackathon focused on data science and AI-driven solutions.
- _____ in an inter-college analytics competition involving real-world business datasets and statistical analysis.
- Built end-to-end data-driven solutions under strict time constraints, collaborating with cross-functional teams.
- Recognized for applying data analysis, machine learning, and problem-solving skills in competitive environments.
